

AMAG Investigator Sponsored Research Concept Form

AMAG Pharmaceuticals is committed to advancing science by supporting external independent research activities.

Specific areas of interest related to ferumoxytol and/or iron deficiency anemia (IDA) include:

- Measuring the impact of IDA in varying patient populations
- Demonstrating the impact of treatment
- Quality of life (QOL) and Health Economic implications of IDA
- Additional investigations related to the underlying properties of ferumoxytol and/or iron oxides

Additional related topics may also be considered. Research studies may include clinical studies, epidemiologic and/or database driven evaluations, and preclinical *in vivo* and *in vitro* designs.

For healthcare professionals interested in a preliminary evaluation of potential AMAG support for independently conducted research studies, please respond to the questions below. Note: AMAG will not provide comments or suggestions to study design or protocol.

Investigator Name/Institution:

Objective:

Study Design:

Sample Size (if applicable):

Anticipated Time to Completion:

Request for Study Medication (If yes, estimate amount):

Estimated Budget (Note: a detailed budget will be required for formal submission and review):

AMAG Medical Affairs will notify you if the topic does, or does not, fit into an area of research that we would like to evaluate further. If there is initial interest, a formal submission of the full ISR application, which would be provided, protocol or at least synopsis of work to be conducted and detailed budget (if applicable) will be required. Approval of submissions is based on scientific merit, feasibility, alignment to the company's strategic focus, and budget considerations, and are not intended to be an inducement or payment for referral of or recommending referral of patients for any AMAG product.
